INTRODUCTION

Divisional Statistics is designed to meet a demand for statistics of areas smaller than that of the State by presenting a range of statistics for statistical divisions and subdivisions and local government areas.

The statistical series have been selected from the wide range of statistics available on the basis of general applicability to most local government areas. Some statistical details are not readily available for areas smaller than the State while other details, although collected and tabulated for small areas, may not be published for particular areas as their publication would be a breach of the confidentiality provisions of the Census and Statistics Act 1905-1973.

This bulletin does not attempt to show all statistics available for each area and where other detailed information is sought reference should be made to other Bureau publications or enquiries should be directed to the Information Service (telephone 228 9439).

DESCRIPTIONS OF DIVISIONS AND SUBDIVISIONS

ADELAIDE STATISTICAL DIVISION

The Adelaide Statistical Division embraces the centre of population, secondary industry and commerce of the State. It is bounded on the west by the sea, the north by the Gawler River and the east and south by the Mount Lofty Ranges.

Soils are mainly hard red duplex soils (red-brown earths) but there are areas of hard yellow duplex soils (podzolic soils) in the cooler hills east of the city and hard brown calcareous earths on the plains north of the city. A large part of the area of the Division has been cleared for urban and agricultural purposes. In the areas not cleared natural vegetation varies from open woodland of the savannah forest type (peppermint and blue gum) on the plains and lower foothills to stringy bark in the higher ranges. Rainfall varies considerably throughout the Division with average annual falls of 400 millimetres to 510 millimetres on the plains to the north and west of the city and along the coastal fringe to the south. Recordings are generally between 530 millimetres and 690 millimetres in the foothills to the south-east of the city, and in the northern and southern sections of the hills increasing to 760 millimetres or more with a maximum of approximately 1200 millimetres at Stirling in the highest part of the Ranges.

Rural activity is largely confined to the outer areas of this Division with emphasis on those products which are consumed by the city dweller e.g. milk, vegetables and fruit with areas of vineyards to the south.

CENTRAL STATISTICAL DIVISION

Central Plains Statistical Subdivision

This Subdivision comprises upper Yorke Peninsula and the area to the north of the Adelaide Plains. The country is mainly flat to undulating although in the central regions the Hummock Range rises to about 300 metres.

The soils are sandy surfaced brown calcareous earths (mallee soils), except near the ranges in the eastern and central regions where hard duplex soils (red-brown earths) and cracking clays are present. Natural vegetation consists of various mallee eucalypts, shrubs and grasses interspersed with native pine, dryland teatree and in the moister parts some river red gums. Average rainfall varies between 300 and 510 millimetres with the lower falls in the coastal region joining St Vincent and Spencer Gulfs.

Considerable areas of wheat and barley are grown and sheep (for both meat and wool production) is the main form of livestock carried. Apart from a large fertiliser industry there is little manufacturing activity in the area.

Yorke Statistical Subdivision

Yorke Subdivision is made up of the southern and central areas of Yorke Peninsula. The countryside is mainly flat to undulating and is predominantly arable.

Brown calcareous earths (mallee soils) and shallow loams on limestone predominate in this area but calcareous sands are found on the foot of the peninsula and hard red duplex soils in the north-central portion. Natural vegetation consists of various types of mallee eucalypts, shrubs and grasses. Native pine and broombush are interspersed in some areas, while dryland teatree and other small shrubs are found in association with the mallee in the southern part of the Subdivision. Annual rainfall ranges between 300 and 510 millimetres with the majority of the Subdivision receiving an average of more than 360 millimetres.

This is essentially a cereal, wool and prime lambs producing district with some diversification into cattle and pigs.

KANGAROO ISLAND STATISTICAL DIVISION

In addition to Kangaroo Island itself this Division includes a few small unincorporated islands around its coastline.

Soils are mainly gravelly, hard yellow duplex soils with calcareous sands and shallow red-brown sandy soils on limestone along the southern coast. Natural vegetation consists of mallee, sheoak, teatree, wattle, honeysuckle and yacca. Average rainfall varies from 760 millimetres on the western end of the plateau to 460 millimetres in the Kingscote area.

Sheep is the main industry of this Division with prime lambs and meat cattle also being significant; some cereals are also grown in the drier areas. Fishing, both commercial and recreational, is an important industry in this area. The entire western end of the Division is one of Australia's largest flora and fauna reserves.

MOUNT LOFTY RANGES STATISTICAL DIVISION

Northern Ranges Statistical Subdivision

The range country from south of the Barossa Valley through to Clare constitutes this Subdivision which varies in width from 16 to 32 kilometres. Throughout the Subdivision there are extensive areas of steep hills which run roughly north and south.

The hills regions have large areas of shallow soils and rocky outcrops while the valleys consist mostly of hard red duplex soils (red-brown earths) but there are useful and interesting areas of other soils as well. In the areas which have not been cleared, the natural vegetation consists of savannah woodland, principally blue gum with sheoak on the drier ridges. Average rainfall varies between 360 and 660 millimetres with the higher falls in the Clare-Watervale and the Lyndoch-Angaston areas.

The Barossa Valley and Clare-Watervale areas are intensively planted to vineyards and their produce is made into wine and spirits by wineries which are mostly located in this Subdivision - the area produces more than half the wine manufactured in the State. The remaining area of this Subdivision is devoted to cereal growing and sheep farming.

Southern Ranges Statistical Subdivision

This Subdivision comprises the hills stretching from just south of the Barossa Valley through to the coast bordering the Indian Ocean; the western lakes district of Lake Alexandrina is also included. Throughout, the topography is characterised by steep hills and undulating country.

Soils consist of a variety of hard yellow duplex soils including ironstone gravelly forms, deep leached sands and hard red duplex soils in the range areas; brown calcareous earths are located in the lakes district. Natural vegetation includes river red gum, stringy bark, blue gum, peppermint, sheoak and many types of shrubs and grasses. Intensive pine plantations have replaced large areas of natural forest. The region receives a higher annual average rainfall than most of the State (ranging from 330 millimetres in the south to 1020 millimetres along the western border).

In the northern part of the Subdivision orchards and milk cattle are important while most of the southern districts are devoted to meat production. The Subdivision supports a number of secondary industries, most of which process farm products.

MURRAY STATISTICAL DIVISION

Upper Murray Statistical Subdivision

Extending from the Eudunda Range eastward to the South Australia-Victoria border the Upper Murray Subdivision includes the plains adjacent to the Eudunda Range, the areas through which the upper part of the River Murray flows and the typical mallee country to the south of the river.

Soils are sandy brown calcareous earths (mallee soils) although near the River Murray there are shallow brown soils over limestone and grey clays along the river flats. Natural vegetation is predominantly mallee eucalypt, acacia and dryland teatree with scattered patches of native pine and sheoak. Average rainfall varies between 200 and 480 millimetres with the higher falls occurring in the extreme west of the Subdivision near the Eudunda Range.

Irrigation areas are scattered along the River Murray, in many cases extending no further than 3 or 5 kilometres from the river. These areas contain extensive orchards, both citrus and stone fruits, and produce over half the State's total production of these items. Large areas are also planted with vines, the grapes from which are used mainly in the production of wines and brandy with the remainder being dried. Cereals are grown in the mallee region to the south of the river and in the area adjacent to the Eudunda Range while sheep raising is spread throughout the

Subdivision. Industry in the Subdivision is largely confined to processing the agricultural produce of the river area e.g. wineries, fruit canning, fruit packing.

Lower Murray Statistical Subdivision

This Subdivision comprises the lower reaches of the River Murray: the north-western side of the area is made up of the steep slopes of the ranges as they fall away to the river, while the remainder is more typically mallee and undulating. Most of the ninety mile long lagoon known as the Coorong makes up the south-western boundary.

Soils are mainly brown calcareous earths with deep leached sands in the south and dark clay soils along the river flats. Natural vegetation is mainly mallee eucalypt, broombush and native pine together with shrubs and grasses. Average rainfall varies between 280 and 400 millimetres, the rainfall becoming higher nearer the sea.

There are large numbers of dairy cattle concentrated on the lower reaches of the River Murray and the reclaimed river flats. In the balance of the Subdivision, cereal crops tend to be grown mainly on the western sides of the river with sheep grazing predominating on the eastern side. Secondary industry is mainly confined to factories processing the agricultural products of the area e.g. milk processing, butter manufacturing, flour milling, but there is some production of agricultural implements.

Mallee Statistical Subdivision

Falling entirely between the River Murray and the South Australia-Victoria border this area is typically mallee and gently undulating, while the south-eastern corner forms part of the Ninety Mile Plain.

The soils consist of sandy brown calcareous earths with light drifts brown sand rises interspersed with sharper rises; there are some sandy duplex soils and deep leached sands in the south. Natural vegetation is mainly mallee eucalypt, dwarf native pine, wattle and broombush together with shrubs and grasses. Average rainfall varies between 250 and 430 millimetres with rainfall being less reliable in the north of the Subdivision.

The northern areas are devoted to wheatgrowing and sheep farming, while barley is also grown in the southern areas.

SOUTH EAST STATISTICAL DIVISION

Upper South East Statistical Subdivision

The region between the coast and the South Australia-Victoria border with the northern boundary near Coonalpyn and the southern boundary just north of Penola constitutes the Upper South East Subdivision. The area is characterised by many dunes and ridges that generally lie parallel to the coast.

Deep leached sands are associated with the dunes of the north while in the south there are considerable areas of dark clay soils. The Subdivision encompasses a large part of the 'ninety mile desert' scheme where previously inferior sandy yellow duplex soils have been changed to highly productive soils by the use of superphosphate and trace elements. Natural vegetation consists of heath, mallee eucalypt, yacca, dwarf honeysuckle and broombush in the north grading through to red, blue, pink and swamp gum in the south. In the north the rainfall varies between 400 and 510 millimetres with a gradual increase to 610 millimetres in the south.

The country is mainly devoted to grazing with sheep distributed throughout and cattle concentrated in the higher rainfall areas to the south. Crops are more important in the drier northern area where wheat, barley and considerable quantities of oats are grown. Crayfishing is also carried out in the coastal waters adjoining this Subdivision.

Lower South East Statistical Subdivision

The south-east corner of the State, south of Penola, forms this Subdivision. The country is generally undulating but interspersed with ranges of low hills which run parallel to parts of the coastline.

Considerable areas of dark clay soils occupy the plains between the ranges. As there is virtually no natural drainage, extensive artificial drainage has been necessary to reduce the level of the water table to permit cropping and the cultivation of pasture. The natural vegetation consists of red, blue and swamp gum with native grasses. Average rainfall varies from 610 millimetres in the north through to 790 millimetres in the extreme south.

With its high rainfall and fertile soils, the majority of this area has been sown to pasture, making year-round grazing possible. This has led to the development of substantial fat lamb, beef, dairying and dairy products industries. The sawmills and paper and by-products factories in this Subdivision use large quantities of softwood which comes from the extensively planted *pinus radiata* forests of the area. In the coastal waters crayfishing is an important industry.

EYRE STATISTICAL DIVISION

Upper Eyre Statistical Subdivision

The Upper Eyre Subdivision embraces the northern and north-western parts of Eyre Peninsula. In the main the land is gently undulating and interspersed with granite hills; in the central part there is an area of sand ridges and flats.

Soils vary between red-brown sand on limestone in the south-west to brown sands in the central areas and sandy brown calcareous earths over the remainder. Natural vegetation consists of mallee eucalypt, broombush, saltbush, bluebush, and isolated areas of sheoak. Average rainfall varies between 280 millimetres near Ceduna to 400 millimetres near Mount Cooper in the south-west.

The area under cultivation is devoted exclusively to the growing of cereal crops and pastures for grazing sheep.

Lower Eyre Statistical Subdivision

This, the largest subdivision, takes in the lower part of Eyre Peninsula and the islands adjacent thereto. There are several ranges of hills in the Subdivision with peaks ranging in height from 150 metres to 495 metres. Along the west coast large areas are taken up by salt lakes.

Soils vary considerably, with red-brown sands on limestone in the west and sandy yellow duplex soils (red-brown earths) in the east, brown sands in the centre and brown calcareous earths in the north-east. Natural vegetation is mainly mallee eucalypt and broombush with shrubs and grasses, but there are areas of sugar gum with bottlebrush, heath and acacia along with isolated red gums. While average rainfall varies between 280 and 610 millimetres, the majority of the Subdivision receives less than 510 millimetres.

Cereal crops dominate the Subdivision's production with nearly 400,000 hectares sown, while sheep are raised, both for wool and prime lamb markets. Fishing is a major industry in the Subdivision with tuna being the most important catch. Port Lincoln, the largest town in the Subdivision, provides bulk handling facilities to dispose of the crops, a large abattoir to facilitate the processing of export lambs, and a fish cannery.

NORTHERN STATISTICAL DIVISION

Spencer Statistical Subdivision

This Subdivision is split by the upper portion of Spencer Gulf. The country to the west of the Gulf is arid and unsuitable for agriculture while the eastern portion consists of coastal plains and the southern regions of the Flinders Ranges. Throughout, the area varies from flat to quite hilly country.

Soils range from brown calcareous earths and crusty red duplex soils in the area west of Spencer Gulf to brown calcareous earths, hard red duplex soils, crusty red duplex soils and shallow compact loams in the east. The vegetation west of the Gulf consists of scattered mulga with saltbush and bluebush, while in the eastern portion patches of savannah woodland are present. Average rainfall varies between 250 and 510 millimetres, with the higher falls occurring on the slopes of the Flinders Ranges.

The Subdivision contains the 'industrial triangle' of Port Pirie, Port Augusta and Whyalla. Port Pirie is the site of the world's largest zinc smelter, which treats lead, silver and zinc ores from Broken Hill in New South Wales. A large power station is located at Port Augusta. At Whyalla the blast furnaces and steel works are fed by iron ore mined in the Middleback Ranges at Iron Monarch and Iron Baron, which also fall within the Subdivision, while the shipyards

are the largest in Australia where ships of over 50,000 tons have been constructed. Cereal growing is confined to the eastern portion of the Subdivision. The main livestock is sheep with a few cattle and pigs carried on some farms in the southern districts.

Frome Statistical Subdivision

Comprising the undulating country to the south of the Flinders Ranges, as well as the southern parts of the ranges, this area is generally hilly in the south grading through to some steep slopes in the north of the Subdivision.

Soils vary from hard red duplex soils (brown earths) and brown calcareous earths (mallee soils) in the southern and western regions to areas of very little topsoil in the northern parts. Some wetter areas in the south have scattered savannah woodland (native pine) as natural vegetation while in the southern parts of the Flinders Ranges there are patches of eucalypt trees. Much of the region is open shrubby plains. Average rainfall varies between 250 and 510 millimetres with the lower falls in the extreme northern and eastern parts of the Subdivision.

The Subdivision is rural in character with sheep as the predominant livestock. Crop growing is limited to the more climatically favourable southern and western regions.

FAR NORTH STATISTICAL DIVISION

The Far North Statistical Division is the largest in the State covering some 827,000 square kilometres or more than 84% of the total area of the State. The whole area is fairly flat with low mountain ranges in three or four places.

No part of the Division receives more than an average annual rainfall of 200 millimetres; large areas receive no useful falls for very long periods and high daytime temperatures experienced over a large part of the year cause rapid surface evaporation. As a result, this region cannot support agriculture to any extent, but an area of more than 41 million hectares is leased for pastoral purposes and carries over 100,000 beef cattle and one million sheep.

The soils are varied in character, sometimes capable of growing vegetation but unproductive in the absence of adequate rainfall. In this Division are found the thin calcareous loam soils of the Nullarbor Plains, the desert sand hills, the gibber deserts, the sand plains and the spinifex areas. The native vegetation consists of those shrubby species which have become adapted to the climatic conditions of the region. The trees are scattered mulga with some native pines on the hills and areas of saltbush and bluebush. Large areas in the north-west and north-east are almost devoid of vegetation, being merely sand or gibber deserts.

The State's major fuel supplies come from this area. Sub-bituminous coal is mined by the open-cut method at Leigh Creek and almost the entire output of the field is used at the Port Augusta powerhouse to generate electricity. From Gidgealpa in the north-east, natural gas is piped to Adelaide for use by the Electricity Trust, the S.A. Gas Co. and other commercial interests.

NOTE: For a more detailed description of the soils in the various divisions and subdivisions, see 'Soils of South Australia' in the South Australian Year Book 1969.

EXPLANATORY NOTES

1. DEMOGRAPHY

Births are allocated to the local government area or unincorporated area of usual residence of mother. Where the usual residence is not in this State the birth is coded to the location of the hospital where it occurred.

Deaths registrations are allocated to the local government area or unincorporated area of usual residence. People who normally resided in another State are coded to the area in this State in which the death occurred.

2. POPULATION CENSUS

One-Parent Families: Children in one-parent families are those children enumerated in private dwellings that contained only one adult in that child's family on Census night. This adult need not necessarily be one of the child's parents. In addition, where one parent only is present the other may be away temporarily e.g. in hospital, interstate, overseas.

Journey to Work: On Census night each employed person enumerated in the Adelaide Statistical Division, who was a usual resident of the dwelling in which enumerated, was asked to supply the address of their place of employment. These addresses were then coded to one of 322 destination zones and their dwelling coded to one of 391 origin zones in the Adelaide Statistical Division. For this publication these zones have been aggregated to provide journeys within and between local government areas and Statistical Sub-divisions. The journeys can be cross-classified by other items of Census data.

Motor Vehicles which were owned or driven by members of the household and garaged or parked at or near that household's dwelling on Census night. This excludes motor cycles, scooters and tractors but includes company vehicles kept at home.

3. LOCAL GOVERNMENT FINANCE

Ordinary Services: Includes the general functions of local government authorities but excludes details of their trading activities such as electricity undertakings.

Rates & Penalties: Includes general rates, special or local rates and payments in lieu of rates.

Roads, streets, etc.: Expenditure incurred by local government authorities only. Includes expenditure on drainage associated with roadworks.

4. DWELLINGS

Occupied Private Dwelling: For purposes of the population census, an occupied dwelling is defined as any habitation occupied by a household group living together as a domestic unit, whether comprising the whole or only part of a building.

Private House: A house (including a semi-detached or terrace house) used for dwelling purposes by a household group.

Home Unit: One of a group of three or more, single or double storey homes, separate or joined together in sets of two or more, all occupying a common block of land.

Other Self-contained Flat: A part of a house or other building which can be completely closed off and which has its own cooking and bathing facilities.

Other Private Dwellings: Includes non-self-contained flats and such sheds, huts, caravans, etc. which are occupied on a permanent or semi-permanent basis.

Occupied Non-private Dwelling: Includes hotels, motels, boarding houses, hospitals and educational, religious and charitable organisations.

Unoccupied Private Dwelling: Includes a dwelling normally occupied but from which the usual occupants were temporarily absent on the night of the population census, a newly-completed dwelling not yet occupied, vacant dwellings available for sale or renting, and buildings constructed as dwellings but used for non-dwelling purposes on the night of the Census.

5. LABOUR FORCE

For the purposes of the 1971 Population Census, the labour force comprised those persons who worked, those who had a job from which they were temporarily absent, those who were temporarily laid off without pay for the whole of the week preceding the Census and those who did not work, did not have a job and were actively looking for work.

Persons in the labour force were allocated to an industry and an occupation.

Industry is defined as any single branch of productive activity, trade or service. All persons engaged in any such branch of economic activity are classified to the particular branch in question, irrespective of their own personal occupation within the industry. For example, a carpenter working for a retail store is classified to the industry of his employer; that is, commerce.

Occupation is defined as the type of work performed by an employed person.

6. USUAL MAJOR ACTIVITY

This table shows persons classified according to their stated usual major activity. This classification should not be confused with the labour force classification which is based on the actual activity of persons during the week immediately before the Census. Thus the number

of persons 'working in a job' represents those people who usually do so and therefore is unlikely to agree with the number of persons in the labour force.

7. BUILDING OPERATIONS

The information in this section covers 'new buildings' which include alterations and additions of \$10,000 and over to existing buildings but exclude minor additions, alterations, repairs and renovations, and all construction activity such as railways, bridges, earthworks, water storage, etc. Semi-detached houses and cottage flats are included in 'Other Dwellings'.

Value: The values shown represent the estimated cost (excluding cost of land) of new buildings when completed (see also 'Completions').

Commencement: A building is recorded as commenced when work on the foundation has begun.

Under Construction: Once commenced, even though work on it may have been temporarily suspended, a building is classified as 'under construction' until its 'completion'.

Completion: A building is regarded as having been completed when the contractor has fulfilled the terms of the contract or, in the case of an owner-built house, when the dwelling is either completed or occupied (whichever occurs first). However, the value in all cases is that of the building as a finished project as planned.

8. MANUFACTURING INDUSTRIES

A Manufacturing Establishment is one predominantly engaged in an activity specified in Division C of the Australian Standard Industrial Classification but the data supplied for it cover (with a few exceptions) all activities at the location, including production of goods primary to another class of industry, selling and distribution activities and extraction of raw materials for use by the establishment. The term 'manufacturing' is used in the broad sense to relate to the physical or chemical transformation of materials or components into new products.

Persons Employed: Working proprietors and employees on the payroll, including those working at separately located administrative offices and ancillary units.

Wages and Salaries: The wages and salaries of all employees of manufacturing establishments including those working at separately located administrative offices and ancillary units. Drawings of working proprietors are excluded.

Turnover: Sales of goods whether produced by the establishment or not, plus transfers out of goods to other establishments of the same enterprise, plus bounties and subsidies on production, plus all other operating revenue from outside the enterprise (such as commission, repair and service revenue), plus capital

lease. Receipts from rent, leasing, interest (other than hire-purchase), royalties and the sale of fixed tangible assets are excluded.

Value Added: Turnover, plus increase (or less decrease) in the value of stocks, less purchases, transfers in and selected expenses.

It should be noted that while value added is the basic measure of an industry's contribution to total production it must not be inferred that when wages and salaries are deducted from value added, the whole of the surplus is available for profit. There are many miscellaneous expenses such as depreciation, workers' compensation insurance, other insurance, pay-roll tax, income tax, rates, advertising, interest on borrowed funds, bad debts and other sundry charges which are not taken into account in arriving at value added.

8. RETAIL TRADE

The 1973-74 Census included establishments classified to subdivision 48 of the Australian Standard Industrial Classification plus cafes, restaurants, licensed premises and hairdressing establishments in Division L but excluded bread and milk vendors, shoe repairers, door to door salesmen and organisations operating vending machines.

Number of establishments: The number of establishments which operated at 30 June 1974. These relate to establishments as such and do not include the numbers of separately located administrative offices and ancillary units.

Persons employed includes working proprietors at end of June 1974, employees (including part-time) on the payroll of the last pay period in June 1974, and unpaid members of the proprietor's family and other unpaid helpers working at least 15 hours during the last week of June 1974. Persons employed include those working at separately located administrative offices and ancillary units in the State.

Value of retail sales: Sales of new and used goods to final consumers for household and personal purposes. Excluded are takings from meals, accommodation, hairdressing, repair revenue, and sales of building materials, agricultural supplies and business equipment.

9. RURAL INDUSTRIES

A Rural Holding is one of one hectare or more used for the production of agricultural products or the raising of livestock.

Area of Pasture relates to that area of lucerne, clovers (all kinds), rye grasses (all kinds), cocks foot, fescue, paspalum,

pharlaris, medics (all kinds), primrose, sudan and veldt used for grazing only (areas of these cut for hay, green fodder or ensilage, or harvested for seed, are classified as area under crop).

Meat Cattle are those cattle kept mainly for the production of meat.

Milk Cattle are those cattle kept mainly for the production of milk or cream for sale.

SYMBOLS USED

Throughout this bulletin the following symbols have been used:

.. not applicable
